## **DETAILED ACTION**

### ***Claim Rejections - 35 USC § 102***

(e) the invention was described in (1) an application for patent, published under section 122(b), by another filed in the United States before the invention by the applicant for patent or (2) a patent granted on an application for patent by another filed in the United States before the invention by the applicant for patent, except that an international application filed under the treaty defined in section 351(a) shall have the effects for purposes of this subsection of an application filed in the United States only if the international application designated the United States and was published under Article 21(2) of such treaty in the English language.

Claim 5 is rejected under 35 U.S.C. 102(e) as being anticipated by Surati et al.

U.S. Patent 6,456,339 B1.

See Figure 6, for example.

Claim 5 sets forth: "A method of aligning a projector (See column 8, lines 25 through 36), comprising projecting onto a screen a test pattern (See test chart 43) comprising a plurality of discrete image components (See column 12, lines 40 through 45.), the position of each image component being individually settable (See column 14, lines 4 through 32.), and adjusting at least one projector with respect to at least one of convergence, geometry, adjacent geometry and overlapping geometry using the test pattern." See Figures 1, 2A and 2B. See column 10, lines 56 through 67 and column 11, lines 1 through 3. The BACKGROUND OF THE INVENTION discusses geometry. The subject is touched on throughout the teaching in its entirety.
